

# RECYCLING ORGANICS IN THE LOWER MAINLAND

## WHY RECYCLE?

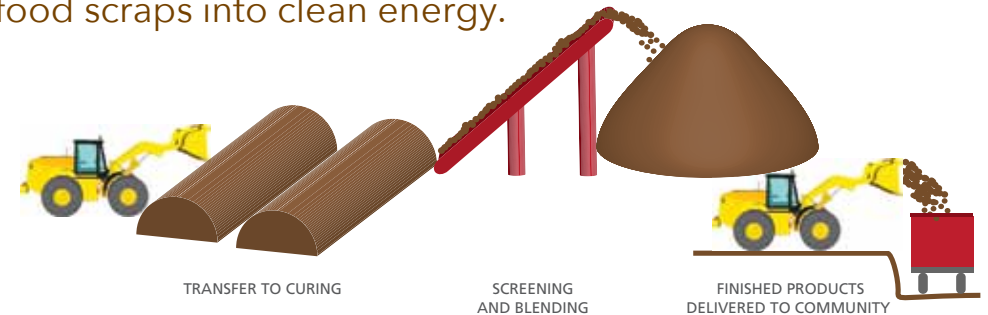

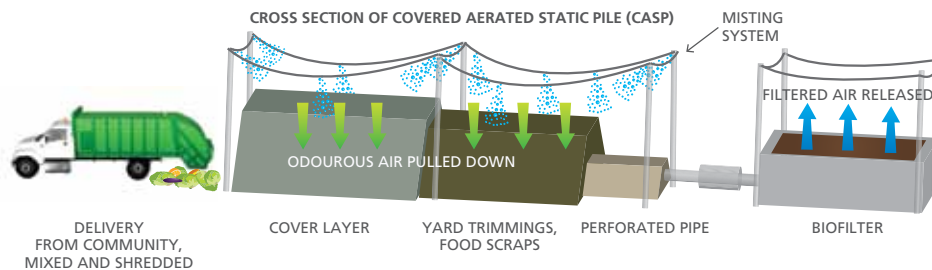

To really become sustainable, the world needs to do a better job of using less “stuff” and doing a better job with what we do use. Recycling and composting can play big roles in thinking globally while acting locally.

## WHO IS HARVEST?

Harvest exists to fuel a more sustainable world - where organic resources are harvested, not wasted. In the lower mainland, we operate four recycling locations, turning hundreds of thousands of organic materials into valuable products that go back into the community.

## HOW DOES RECYCLING AND COMPOSTING WORK AT HARVEST?

Our most well-known facility is in Richmond, where we operate a commercial composting and clean energy facility. Residents and businesses sort their scraps, which get delivered to our facility. We then compost food scraps and yard trimmings into nutrient-rich soil products that get returned to local community landscapes. We also have an anaerobic digester that, when in operation, turns food scraps into clean energy.

## WHAT ARE HARVEST'S PLANS FOR THE FUTURE?

At Harvest, we are committed to focusing on our operations and community engagement. For our facility in Richmond, that means a keen attention to any odour-producing activities, and providing top quality soil blends for our customers.
